EDUCATION

Nirma University

B.Tech. in Computer Science and Engineering (Minor: Cyber Security)

CGPA: 8.99/10

Ahmedabad, Gujarat

July 2023 - May 2027 (Expected)

The Modern School

SSC - 95.2% HSC - 97.2%

Barmer, Rajasthan

2020 - 2022

EXPERIENCE

Software Development Intern

React, TypeScript, FastAPI, Python, MAVLink

Verniq UAVs Pvt Ltd

May 2026 - Jul 2026

- Engineered a **FastAPI backend**(MAVProxy bridge, telemetry and command services) and a React/TypeScript frontend with Mission, Surveillance, and Calibration consoles for a UAV Ground Control Station (GCS) supporting mission planning and live surveillance.
- Validated the system through real, non-simulated drone field testing, confirming live **MAVLink** telemetry, RTSP camera feed, GPS accuracy, and mission deploy on actual flight hardware, after first building and validating an **ArduCopter SITL** simulation pipeline.
- Prototyped an Android Ground Control Station for autonomous drone survey mapping, integrating mission planning, real-time telemetry, and MAVLink communication.

PROJECTS

Minion Vulnerability Scanner[GitHub]

Node.js, React, PostgreSQL, Socket.io, JWT, Docker

- Engineered a full-stack vulnerability scanner using React, Node.js, Express.js, PostgreSQL, and Socket.IO to perform comprehensive web security assessments.
- Developed a modular scanning framework supporting web, API, DNS, SSL/TLS, CMS, network, cloud, and mobile security scans, with real-time progress tracking and vulnerability streaming.
- Implemented JWT authentication, role-based authorization, SSRF protection, rate limiting, and PostgreSQL (Sequelize) for secure data persistence.
- Automated downloadable PDF/CSV security reports containing vulnerability severity, evidence, CVE references, and remediation recommendations, while designing an extensible architecture for scalable, concurrent security scanning.

TriageX: Forensic Triage Tool [GitHub]

Python, scikit-learn, Random Forest, Isolation Forest, psutil

- Engineered a portable Windows forensic triage tool that performs live process, network, and system analysis without requiring installation on the target machine.
- Developed a dual-machine learning pipeline combining Random Forest and Isolation Forest models to identify suspicious and malicious process behavior.
- Generated integrity-verified PDF, HTML, and JSON forensic reports with SHA-256 hashing, per-process threat scoring, network connection mapping, and actionable incident response recommendations.

SnapSense AI

React, Node.js, Express, MongoDB Atlas, Groq Vision API, Google APIs

- Built an AI-powered productivity platform that automatically classifies screenshots, extracts structured information using a vision language model, and routes data to Google Calendar, Tasks, Drive, and Sheets.
- Implemented Google OAuth authentication, real-time image processing, MongoDB persistence, and freemium subscription management with online payments.
- Designed a scalable React and Node.js architecture with secure API integrations, automated workflow generation, and user-editable AI actions for seamless productivity automation.

LEADERSHIP & EXTRACURRICULAR

Core Committee Member

Computer Society of India, Nirma University

- Led the creative team for HackNuthon 6.0, a national hackathon at Nirma University with 1200+ participants.
- Managed Daily Coding Challenges for Codecrux and organized Cubix, a flagship CSI event.

SKILLS & ACHIEVEMENTS

Languages:

Python, C++, C, SQL

Web & Frameworks:

HTML, CSS, JavaScript, React, Node.js, Express, Flask, REST APIs

Databases:

PostgreSQL, MongoDB Atlas

Cloud & DevOps:

AWS, Docker, Supabase

Tools:

Git, GitHub, Linux, Cisco Packet Tracer, Electron, MAVLink

Security:

JWT, OAuth 2.0, XSS, SQL Injection, IDOR, SSL/TLS

Competitive Programming:

LeetCode 1712 (Aj_singhvi) | Codeforces Max 1049 (Aj.singhvi)

Certifications:

Gen AI Academy - Google Cloud × Hack2skill Gen AI Exchange Program (2025)
AWS Academy Graduate - Cloud Foundations
